PIA

FACTS & FIGURES 2026

PIA, Finnish Defence and Aerospace Industries, represents the Finnish companies operating within defence, aerospace and security.

PIA has ca. 300 member companies. The membership has grown significantly over the past three years. PIA was founded in 1994.

In Finland, a viable and competitive domestic defence, aerospace and security industry is a fundamental element of credible national defence and comprehensive security. Finnish companies work together with authorities in a Public-Private Partnership model to support them and to carry out the responsibilities needed to secure Finland and our critical infrastructure. A major part of army, navy and air force maintenance has been outsourced to domestic companies, which act as close partners to the Defence Forces.

Critical capability areas include C5ISR and net-centric capabilities, engagement, mobility, and protection. These technologies and products are necessary in ensuring that Finland has the required technology and engineering know-how for research, development, production and life-cycle management. The Finnish industry must have the capability to support our defence and security in all situations, also in times of crisis.

With a few exceptions, most Finnish defence, aerospace and security companies are privately owned SMEs. One of their strengths is that many of them also operate in other industrial sectors. We therefore benefit from a larger ecosystem with substantial R&D investment (15 % of turnover). Turnover within defence, aerospace and security was approximately 4,2 billion Euros in 2025, with a significant increase of +42% of the previous year. Direct employment was ca. 14 000 and the sectors contributed to ca. 35 000 indirect jobs in Finland. The Finnish domestic

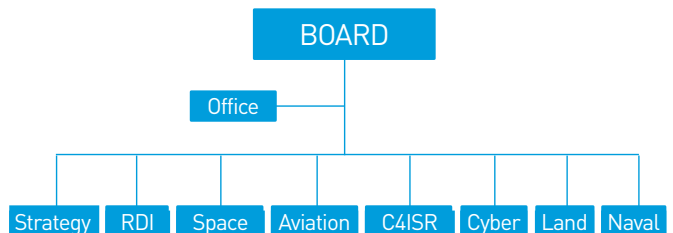

market is relatively small; therefore, companies look abroad for customers and partners. The export volume varies annually usually from 40% to 60%. In 2025 it was ca. 55%.

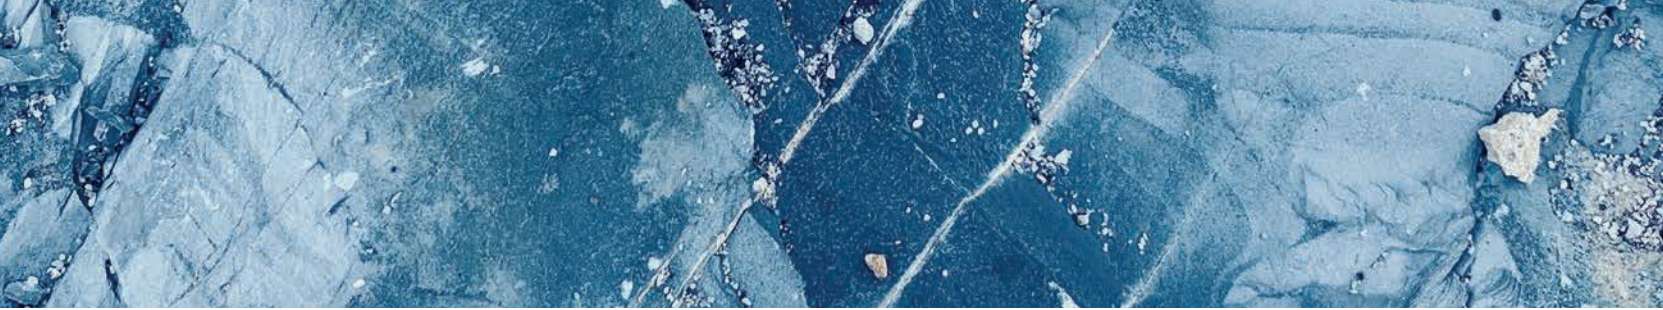

To be competitive we must be highly innovative and agile. We strive for excellence and build on trust. Assisting member companies in their networking and export activities is amongst PIA's priorities.

PIA is a member of ASD (Aerospace, Security and Defence Industries Association of Europe). PIA represents the Finnish defence industry in NIAG (NATO Industrial Advisory Group), in EU and EDA and in Nordic Cooperation. PIA operates as part of Technology Industries of Finland.

PIA Organization

PIA's strength is in its members and their active participation in PIA's activities. There are eight working groups within PIA. These groups form a platform for the respective companies to come and work together for the common good of PIA members. PIA office coordinates and supports the work of the working groups.

PIA Board of Directors

Mr. Esa Rautalinko, Chair of the Board of Directors
Leadership Advisor, Patria Group

Mr. Jerry Kettunen, Vice-Chair of the Board of Directors
CEO, Savox Communications

Dr. Matti Anttila, Chair of the Space Group
Business Development Director, Space & Defence, Huld

Ms. Merja Annala, Chair of the Land Capabilities Group
CEO, Systematic Finland

Mr. Turkka Jäppinen, Chair of the Naval Capabilities Group
Director, Business Development, DNY Finland

Mr. Jussi Järvinen, Chair of the Strategy Group
Executive Vice President, Finland, Patria Group

Mr. Timo Levoranta, Chair of the C4ISR Group
CEO, Digia Finland

Mr. Ville Meskus, Vice-Chair of the Space Group
Head of Business Development, Defence, Reorbit

Mr. Jarmo Puputti, Chair of the RDI Group
CEO, XD Solutions

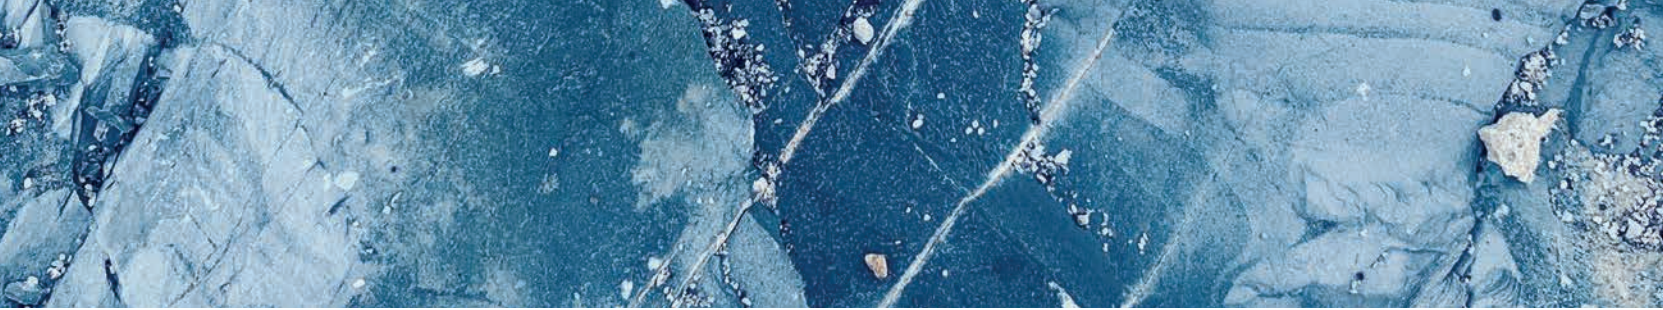

Mr. Petri Toljamo
CEO, Bittium

Mr. Kristian Tornivaara, Chair of the Aviation Group
CEO, Saab Finland

Mr. Kim Westerlund, Chair of the Cyber Group
Head of Cyber Security Solutions, DNV Cyber

The Finnish defence, aerospace and security industries focus on certain niche areas. Finland is home to global market leaders in armored wheeled vehicles, turreted mortar systems, logistics and certain C3 systems. Finnish companies are also world-leading within C5ISR. Dual-use products with security solutions and civilian applications are increasingly important.

**FROM EXTREME
CONDITIONS**

PIA member companies invest significantly in R&D, ca. 15% of their annual turnover. PIA members are acknowledged internationally for producing high-quality, premium products with long life-cycle performance and being innovative in their methods of utilizing technology. The Finnish climate sets demanding requirements for defence technologies. Everything must function reliably in an arctic environment as well as in summer's heat and autumn rainfalls – and be NATO interoperable. We do excel in snow-how, but most of our products are used in the most demanding environments and crisis management operations around the world.

**NO-NONSENSE
ATTITUDE**

The Finnish value promise is high-quality and reliability. We take pride in keeping our promises. Our actions speak louder than words. We deliver.

PIA
FINNISH DEFENCE AND
AEROSPACE INDUSTRIES

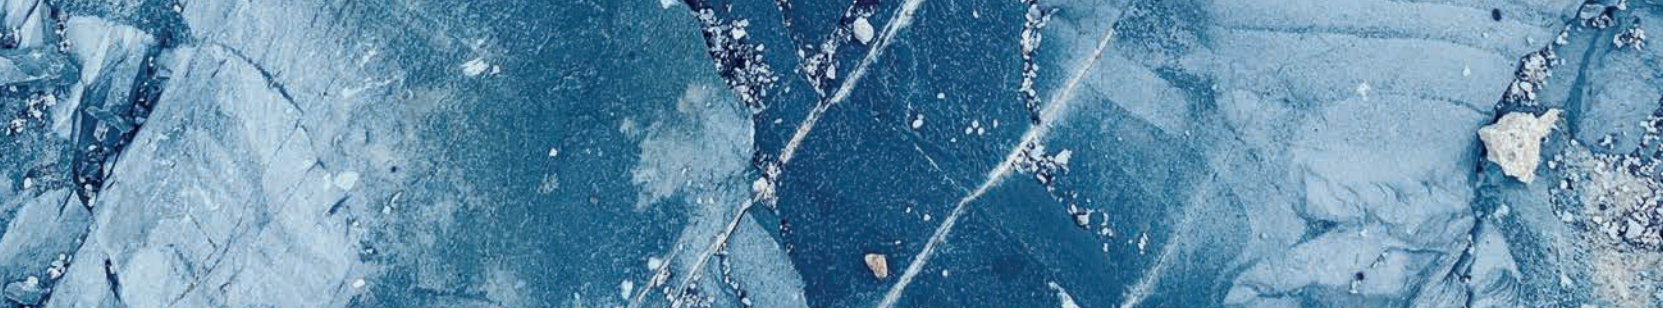

PIA Facts and Figures 2026 introduces PIA member companies and their products, services, and expertise. Our office is at your service for any matters concerning defence, aerospace and security industries in Finland.

PIA FACTS AND FIGURES

Year 2025 marked a substantial growth within PIA's member companies. The cumulative turnover increased by +42%. The strongest growth was seen in the Aerospace sector.

The number of PIA members also grew. More and more start-ups, component providers and companies producing digital solutions are joining PIA and the ecosystem in Finland.

14 000 Employees
~20% women

Cumulative turnover
4.2 Bn Euros
growth +42% from 2024

Over 15% of cumulative turnover to RDI

Exports 55% of cumulative turnover to over 160 countries globally

Capabilities

- C5ISR; digitalization
- Space
- Mobility; vessels and vehicles
- Engagement; kinetics and non-kinetics
- Protection; from persons to infra.

HOT right now!

- Finnish ammunition production
- Net-centric capabilities
- Space
- Digital Solutions
- Armoured vehicles
- Finnish model of Comprehensive Security and Security of Supply

3D Formtech Oy

3D Formtech provides high-quality 3D printed components for industry for different business needs internationally. Our product offering includes 3D printing of plastic and metal with several different materials.

We provide services for manufacturing, design and finishing with high quality coloring and coating processes.

Business, Products and Services

3D printing materials for plastic: Biocompatible polyamide PA12, Glass reinforced polyamide (PA1+GF), Flexible thermoe-lastic TPU material, Fire retardant PA2241FR (JAR 25), Fire retardant PA2210FR (UL94 V-0) and Electrostatic discharge material PA11 ESD.

3D printing materials for metal: Aluminium AlSi10Mg, MaragingSteel MS1, StainlessSteel 316L, Titanium TiCP Grade 2 and Titanium Ti64 Grade 5.

Post-processing plastic parts: coloring, coating, painting, polishing, inserting. Post-processing metal parts: machining, polishing, heat treatments, blastings. Additional services for 3D printing (modelling, consulting, 3D scanning).

3D Talo Finland Oy

3D Talo Finland Oy is Your partner in virtual reality. We are a 100% Finnish-owned company based in Kuopio. Our primary focus revolves around providing immersive and memorable virtual reality training experiences. Through

our solutions, trainees can safely and effectively practise and enhance skills that would be challenging, costly, or hazardous to train in traditional settings. Rather than passively absorbing information from screens, virtual reality empowers trainees to engage their bodies and hands, immersing them in lifelike scenarios.

Business, Products and Services

We plan the virtual training with You from the beginning. All planning stages are based on researched knowledge of the most effective learning methods in VR without forgetting the end-user experience in both functional and visual aspects. We create virtual environments for VR glasses using both 3D modelling and 360-degree photography, considering each project's unique requirements.

61N Solutions Oy

61N Solutions Oy designs and develops critical information systems and AI solutions for the defense and security sectors. We help ensure national security stays one step ahead.

Business, Products and Services

We are a Finnish, technology agnostic and privately owned company with decades of experience in digitizing the core operations of defense and security authorities. Our deep understanding of operative environments and mission-critical systems makes us a trusted partner in developing our customers' most essential capabilities.

Accenture Oy

Accenture is a leading global professional services company, providing a broad range of services and solutions in strategy, consulting, digital, technology and operations. We are a talent and innovation-led company

with approximately 800,000 people serving clients in more than 120 countries. Technology is at the core of change today, and we are one of the world's leaders in helping drive that change with strong ecosystem relationships.

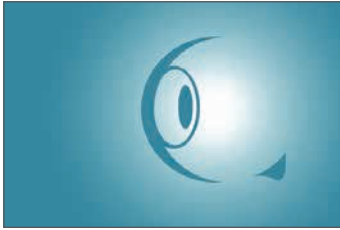

Business, Products and Services

Our defence offerings support the full value chain from manufacturing to mission, enabling transformed digital defence capabilities. We integrate across people, process, and technology - leading with warfighter experience, driving readiness with joint synthetic environments and NATO interoperability, all enabled by total enterprise reinvention with platforms, data, AI, cyber and cloud. We provide digital services from strategy to sustainment - accelerating mission outcomes while optimizing operations.

Advenica Oy

Advenica offers advanced cybersecurity solutions and services for business-driven information exchange, secure digitalization and high assurance. For more than 20 years Advenica has enabled organizations and

companies to take digital responsibility by providing future-proof, sustainable solutions.

Business, Products and Services

Advenica analyses, designs and implements fundamental protection to prevent intrusion, data leakage and manipulation of critical information. We control every step from design to the after-market to ensure high assurance. With our products and services customers can take full advantage of digitalization without jeopardizing security, integrity and privacy. As our products are future-proof, today's critical information is as well-protected even with tomorrow's technological development. High requirements on security mean we develop and produce vital parts of solutions in-house.

AGATE Sensors Oy

AGATE Sensors introduces software-defined hyperspectral sensing in an ultra-miniaturized, solid-state format for defence and dual-use systems.

By transforming hyperspectral measurement from

large, optics-based instruments into a compact semiconductor platform, it delivers laboratory-grade spectral intelligence in a rugged, deployable form. This makes hyperspectral capability scalable and practical for operational platforms where size, fragility and cost have traditionally limited adoption.

Business, Products and Services

For defence integrators and system developers, Agate Sensors opens new possibilities in threat detection, ISR, C-UAS and human performance monitoring—bringing spectral awareness to systems that could not previously support it.

Key characteristics:

- Ultra-miniaturized, chip-scale architecture
- Solid-state, no moving optical assemblies
- Software-controlled and upgradeable
- Designed for integration into operational platforms

Managing Director Mr Tommi Leino

AlliveSim Oy

Established in 2018, AlliveSim provides AI-powered simulations for defence, leveraging synthetic data from virtual sensors to train autonomous machines. Our tools enhance situational awareness and scene monitoring for improved decision-making and preparedness.

Business, Products and Services

AlliveSim offers:

- Licenses for our advanced AI-powered simulation software
- Realistic virtual environments replicating diverse operational scenarios, including harsh climates
- Simulation of various sensor types and generation of synthetic data
- Tools and services for testing, training, and validating concepts and products
- Support for autonomous systems development

Airbus Defence & Space Oy

Airbus Defence and Space Oy is a leading actor in providing communication solutions to public safety and security organisations. In today's increasingly complex threat environment, Airbus Group, as a European actor, brings interoperable and collaborative solutions to ensure superiority for combat systems across the five operational domains: land, air, sea, space and cyber. Airbus combines more than 50 years of field-proven technology with next-generation architecture.

Business, Products and Services

For networks and systems, Airbus' secure and resilient communications capabilities provide comprehensive bandwidth as well as field proven best-in-class capabilities and solutions for Sensor Fusion, Ground Based Air Defence, Intelligence, Multi Domain Operations and Cyber Security. The company's world-class portfolio of products includes also robust, unmanned aerial systems (UAS) as well as the A400M and C295 airlifters as well as the A330 Multi-Role Tanker Transport and a full set of products and services for Space.

Managing Director	Mr. Juha Laakso, MD Airbus Defence and Space Oy (Communication solutions for public safety organisations)
Owner	Listed company with home countries (GER, FRA and Spain) as key owners.

Aisikon Oy

Aisikon Oy is a customer-oriented subcontractor of challenging machined parts and components for harsh conditions. The keys to our success are our skilled and motivated staff and efficient CNC-machinery and production methods, as well as decades of experience.

Business, Products and Services

We are experienced in working with stainless and acid resistant steel, aluminium, brass and plastics, but also with challenging materials such as superduplex, titanium, 254 SMO, Inco 904 and alloy C-276. We hold ISO 9001:2015 and ISO 14001:2015 certificates.

Material traceability is everyday for us, enabling a high standard of logistical traceability applicable with DoD identification program and certificates such as EN 10204. Aisikon has devices for 3-dimensional measurements and barcode symbology. Examples of our components' end-use include: pipes, valves, flow control, power train, marine, hydraulics, precision mechanics and measuring equipment.

Owner	Privately owned

A-Laiturit Oy

NorD® – Patented Floating, Modular, and Scalable Platform Solution.

Business, Products and Services

- A patented floating pontoon system designed to replace static harbor infrastructure with agile, deployable, and relocatable alternatives
- Modular and scalable systems for civilian, governmental, defense, and security applications
- Enables a wide range of structures, including floating harbors, bridges, temporary and relocatable ports, helicopter landing platforms, RoRo solutions, and approaching ramps
- Rapid deployment and reconfiguration without the need for extensive, case specific engineering calculations
- Enhances operational flexibility and response capability in both routine operations and crisis situations
- Supports dispersed operational concepts—build, expand, reposition, and adapt as required
- Cost effective life cycle solution: reusable, transportable, and built for long term service
- Engineered for demanding Arctic environments
- Increases resilience

Alamarin-Jet Oy

At Alamarin-Jet Oy we specialize in providing waterjet propulsion units and control systems that are designed to excel in a variety of marine applications. Whether you're powering a leisure yacht, commercial vessel, or a

high-performance craft, our products are engineered to deliver optimal performance and efficiency.

Our range of waterjet propulsion units and control systems are built to accommodate input power of up to 1500 kW / 2040 HP, ensuring that even the most demanding marine environments are met with power and precision. Backed to cutting-edge technology and years of expertise, our solutions guarantee unparalleled reliability and durability, allowing you to navigate the waters with confidence.

Driven by innovation and a commitment to excellence, Alamarin-Jet is your trusted partner for your waterjet propulsion needs. Experience the difference with our world-class products and dedicated support team, and enthusiasts and industry professionals worldwide.

Alaris Cojot Oy

Founded in 1986, Alaris COJOT has a reputation for delivering field-proven, quality equipment, on time and on budget. Our expertise and experience make us a recognised and trusted source of highly reliable and

durable antenna equipment, and our products can be found in some of the world's most demanding environments.

Business, Products and Services

Our products centre around

- Tactical communication (C4i), electronic countermeasure (ECM, CIED, CUAS) and spectrum monitoring (ISR) applications
- Omnidirectional and directional antennas for the manpack, handheld, and vehicle segments - including solutions for fixed installations like masts and shelters - ideally suited for high- and low-power applications
- Our range of wide and narrowband antennas includes the latest, state-of-the-art SMART antenna solutions like Steerable Beam Antennas
- Our extensive range is complemented by the comprehensive portfolio of our sister companies from the Alaris RF Technology Group

Alucat Catamarans Oy

ALUCAT® boats are top-level products for commercial use - manufactured by professional standards in Finland over 20 years. Our R&D activities are based on meticulous testing and user experience analysis.

Aluminum catamaran boats are extremely stable and easy to control due to their unique design. Our company goal is to manufacture the safest boats in the world.

Business, Products and Services

Our patented boat design enables every user to get a custom-tailored boat with a reasonable cost (17-42 ft). ALUCAT® has a bow ramp, a great variety of accessories and any engine option on the market. Its first-class maneuvering characteristics with load, greater capacity compared to others and a shallow draft makes it an unbeatable choice for any user.

ALUCAT network services customers mainly in Europe and North America. Patrol boats, pilot boats, SAR / firefighting boats, passenger boats and work boats.

ALUCAT® is SAFE. In real life, it means Stability, Area, Flexibility and Economy.

Arctest Oy

Arctest is a leading Nordic manufacturer of environmental test equipment with its own sales office in Finland and Sweden. The export is global, and in Europe, we work primarily through local partners.

Business, Products and Services

Environmental Test Chambers – Environmental equipment tailored to customer needs.

Arctest product portfolio consists of Climate Test – chambers, rooms, mobile containers & trailers.

Having climate test equipment made mobile is the optimal solution when there is no space indoors or other reasons require tests to be done in places where there is no real estate to place the test equipment. This product line is especially popular amongst our Military customers and the Defense equipment industry. Our solutions are designed to be able to stand outdoors in all weather conditions for a long time without affecting the test result.

Artex Oy

For nearly 100 years, Artex has produced durable textile products that stand the test of time. We specialize in the development, manufacturing, and refurbishment of high-performance seating and interior components for

military and defence use. Our offering also includes equipment, garments, and accessories meeting the same exacting standards. All solutions are engineered for durability, safety, and functionality—ensuring mission-ready reliability in the toughest environments. With advanced materials and precision craftsmanship, we deliver systems built to endure. Our nine factories are in Finland, Sweden, Denmark, and Latvia.

We believe sustainability starts with smart design. Our concept enables product reuse instead of buying new, reducing environmental impact. We aim to make every step—from development to delivery—as sustainable as possible. Continuous improvement is always on our agenda.

Aufwin Defence Systems Oy

Aufwin Defence Systems designs and manufactures Aufwin Perimeter Security (APS) and Aufwin Perimeter Defence (APD) systems that are autonomous area Security, Surveillance, Reconnaissance and Force

Protection platforms. The platforms are based on various sensors, autonomous drones, AI, and other supporting software that autonomously alarm, identify, respond to, and act on the identified objects that have breached the secured perimeter.

The platforms are highly flexible and can be installed in individual units or entire platforms. The systems identify all objects in air, sea, EMS and ground, i.e. moving or static, living or man-made, appearing on the secured perimeters.

Aufwin Perimeter Security and Perimeter Defence are designed for military purposes but can also be used in civil applications. Aufwin Defence Systems operates in Tactical and Combat Technical domains on an open architecture with other C2/3/4/5/6-ISRT -systems.

Champion Door Oy

Champion Door is a Finnish company founded in 1992 and part of the international BMP Group since 2024. Champion Door specializes in designing and manufacturing large vertical lift fabric doors for aviation, defense, and heavy industry applications. Its solutions are tailored to demanding environments and large-scale openings, combining lightweight structures with durable materials.

Business, Products and Services

Operating globally, Champion Door supports projects from design to lifecycle maintenance, with installations delivered to over 60 countries. The company focuses on reliability, energy efficiency, and long-term performance in mission-critical infrastructure.

Componenta Oyj /Componenta Manufacturing Oy

Componenta is an international technology company. We at Componenta are committed to providing you with high-quality, sustainable machined metal components, forged blanks, plate cutting components and pipe products.

Componenta's business model is built on strong and long-term customer relationships. Our customers are international OEM's within a wide scope of industries. Componenta's all operational functions are located in Finland, close to customers.

Business, Products and Services

We provide our customers with services covering the entire supply chain, ranging from component design support to manufacturing, and from logistics services to the delivery of complete solutions.

Our broad manufacturing services include

- Iron castings from our greensand facilities
- Machining services for a wide range of material grades incl. iron casting, steel, Aluminium
- Steel fabrications and plate cutting and bending service
- Tube bending service for wide range of applications
- Forgings

Confoot Oy

Confoot Oy is a Finnish company specializing in portable lifting solutions for both Containers and Weapons systems which have ISO-Corner Castings. We have dealers in over 36 markets and serve clients worldwide.

Business, Products and Services

We design and supply patented, lightweight and portable lifting solutions that allow cargo containers and ISO corner-equipped modules such as (Fuel Storage Systems, Weapon platforms & Radars) to be quickly positioned, stabilized, and used anywhere without the need for cranes or fixed infrastructure assets, enabling fast deployment and flexible logistics in demanding environments.

Our core service offerings:

- Customized lifting solutions for portable weapons systems
- Portable Container lifting solutions capable of handling 20–45 tons
- Patented Products

Crosshill Ltd

Crosshill designs, tests, and manufactures highly secure electronic systems for military, aerospace, telecom, and space applications.

The systems are protected against modern attacks and tampering methods to

ensure security and operational capabilities in all circumstances. Crosshill also offers advanced security testing services to evaluate the overall security level of electronic systems and devices. State-of-the-art passive and active testing methods are applied for both semiconductor and board level security assessments.

Business, Products and Services

Crosshill has extensive experience in advanced microelectronics systems that lay the foundation for highly secure communication systems and cryptographic equipment: FPGAs, SoCs, DSPs, TPMs, and cryptoprocessors. Anti-tamper services focus on silicon, sensor, and mechanical level protection mechanisms to safeguard classified information and sensitive IPs.

Dispelix Oy

Dispelix is a global leader in augmented reality (AR) waveguide display technology. Dispelix specializes in developing and delivering transparent waveguides for both enterprise and consumer applications.

Dispelix's advanced waveguides function as see-through displays, seamlessly merging the real and virtual worlds within the user's field of vision. As a trusted and visionary partner, Dispelix enables industry leaders in AR to redefine the form, function, and feel of their devices.

Business, Products and Services

Dispelix develops and delivers transparent waveguides that can be used as see-through displays in a wide range of devices and vehicles. Our waveguides serve as near-eye displays in smartglasses, head and helmet-mounted devices, and as head-up displays in aviation, ground vehicles, and navy vessels. Additionally, Dispelix waveguide technology is applicable in thermal and night vision goggles, as well as various scopes.

Dispelix utilizes self-developed, proprietary software for designing waveguides, ensuring the designs are optimized for physical properties, optical performance, and mass manufacturability. Partnering with Dispelix enables the development of waveguide displays tailored to your AR devices, accelerated product development cycles and high performance even in the most extreme conditions.

ELFys, Inc.

ELFys provides light detectors with sensitivity better than anything seen before, literally catching every ray of light. The technology greatly improves any light sensing application ranging from health monitoring to defence applications.

The superior performance of ELFys photodetectors is based on an inventive patented combination of modern MEMS nanotechnology and atomic layer deposition.

Business, Products and Services

ELFys provides photodetectors offering industry-leading sensitivity across the UV-VIS-NIR spectrum. ELFys photodiodes capture all incident light, clearly outperforming conventional sensors and enabling highly accurate light detection even in challenging conditions.

Products include innovative 4-quadrant detectors providing positional information optimized for applications such as laser alignment and guidance. ELFys solutions are widely used in key applications: Space & Defence, Health Monitoring and Analytical Instrumentation, delivering superior performance.

FabPatch Oy

FabPatch Ltd is a Finland-based developer and manufacturer of a field-proven textile repair solution. Utilizing rub-on, no-sew patch technology, FabPatch enables rapid, durable repairs to a wide range of textiles in both austere field conditions

and maintenance environments. All products are designed and manufactured in Finland to meet high-performance standards.

Business, Products and Services

FabPatch technology is compatible with most textile types and is operationally trusted by users across sectors, including defense and professional workwear sectors. In addition to a dedicated product line, FabPatch offers custom manufacturing services utilizing client-supplied materials—supporting uniformity, sustainability, and mission-specific functionality. The solution has gained international recognition and is valued for enhancing lifecycle sustainment, reducing logistical burden, and contributing to force readiness through extended equipment usability.

FenComp Oy

FenComp was founded in 2012 to utilize our decades of know-how and experience of wireless technologies in professional technical sales and R&D of RF & power products.

FenComp stands out as a paragon of ingenuity with its own OTA (Over-the-Air) test chamber products, cutting-edge R&D department and exclusive representation and sales of premium electronic components.

FenComp has been involved in numerous OTA test systems and high-tech projects in various business areas such as telecom, industry, medical, space and military.

Business, Products and Services

- OTA (Over-the-Air) test chamber family and antenna products of Finnish origin from 1GHz to 70GHz
- TEMPEST and HEMP filters of EU origin for AC/DC power and data
- Waveguide and coaxial products of EU origin for radar and telecom
- RF, mmWave and power components of EU origin for military and space
- Signal monitoring & intelligence, electronic warfare systems of EU origin
- Low loss & phase optimized RF cable assemblies

Finceptum Oy

Finceptum helps customers secure their operative solutions with the use of open-source technologies and device expertise.

Business, Products and Services

We assist application developers and end user organizations to build secure operating platforms for their critical solutions from tablets to virtualized servers. The platform includes the

operating system that is hardened for the specific use case and the selection of hardware with the required security profile. The platform is designed to protect against known and future vulnerabilities. This allows the operative solution to be used with confidence even in the most critical environments. The solution includes a secure installation service.

As part of the platform development or for other needs related to security, we provide computer and device analysis to make sure that the hardware does not include compromised components.

We also assist customers to modernize their old operating environments of existing solutions.

Finnish Meteorological Institute

Finnish Meteorological Institute (FMI) is the government research and service institute for the atmosphere, marine environment and near space. Since 1838, FMI has combined scientific research with operational

services for defence, industry and the public sector. With over 700 experts, FMI is a key player in international innovation in weather, climate, oceanography, the electromagnetic spectrum and space.

Business, Products and Services

FMI provides in depth analysis of operating environments and fit for purpose services, data products and applied research solutions across sea, atmosphere and space domains. Customer needs are addressed using experimental, theoretical and supercomputing methods. FMI's strong international cooperation — including engagement in global organisations and NATO frameworks — together with project experience from more than 100 countries, strengthens its ability to identify and respond to customer requirements.

Frictape Net Ltd

Frictape designs and manufactures safety solutions for helidecks and Navy flight decks. With installations on over 2,000 commercial helidecks worldwide and serving 8 sovereign military or paramilitary organizations, our solutions are the most

popular choice for helideck safety in the world.

Our success stems from innovative material engineering and user-centric design, resulting in extreme reliability and significantly (50%+) lower lifetime costs.

Business, Products and Services

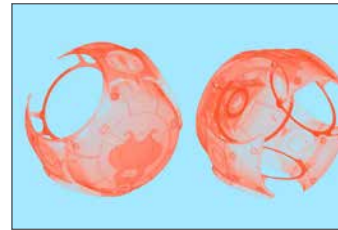

Core Products and Services:

- Helideck Perimeter Safety Nets: Prevents falls from the deck, easy to install, maintenance-free, 10-year certified lifespan, used on 1,000+ vessels.
- Landing Nets: Ensures needed friction for the helideck, protects deck against wear and tear. Lightweight, 5-year certified lifetime, maintenance-free, installed on 1,500+ helidecks.
- Circle & H Helideck Lighting: Enhances depth and position awareness for pilots during final approach and departure.
- Installation & Maintenance: Full service offering including product installation, helideck friction testing, inspections, and perimeter frame maintenance.

Geneset Powerplants Oy

Geneset Powerplants Ltd is an experienced Finnish energy and power industry-applied equipment and systems supplier. Geneset is specialized in power generation, energy efficiency and power-saving fields. Product

groups vary from diesel and gas generators 30 - 3000 kVA to modern CHP- gasification technology equipment using renewable fuel materials such as waste or clean biomass. During the last 30 years, products have been exported to over 30 countries.

Business, Products and Services

Geneset Powerplants Oy manufactures EPM and HPM (MIL-STD-285/IEE-299) protected prime power systems installed in a weatherproof canopy or container, including control systems and an automatic transfer switch. The devices can be towed with equipment according to the road traffic law or equipped with hook lift equipment. Gasification technology plants can be delivered in a few containers, making transport easy. On the site, it needs just plug and play, and you can have electrical power and thermal or cooling energy.

HT Laser was founded in 1989. We serve in seven cities in Finland and in Poznan, Poland.

Business, Products and Services

HT Laser's services consist of system and component deliveries as well as all cutting, bending, welding, laser welding, machining, surface treatment, assembly, 3d metal printing and product development services.

We have 20 years of experience in serving international defence industry. We offer

- demanding welded and machined components, e.g. fuel tanks, hatches, seating and covering systems,
- laser welding expertise, innovative light-weight structures made of corrugated core steel sandwich plate,
- ballistic materials,
- 3d metal printing and related design services.

Huld Oy

Huld - part of Gofore group - is a technology design house. We offer a combination of SW and product development expertise. With us, you build intelligent solutions for defence, security and space solutions

Business, Products and Services

DEFENCE AND NATIONAL SECURITY

Our long history in space business combined with our data analytics and machine learning expertise allows us to develop, deliver and maintain revolutionary military capabilities for land, air and sea.

HIGH SECURITY SW FOR MIL AND NATIONAL SECURITY

Our customers include those with higher-than-normal security requirements. As a result, we have the ability to provide our customers with secure information systems and SW.

SPACE BASED MIL SYSTEMS

Huld - part of Gofore group - defence builds upon our decades long systems engineering experience derived from implementing mission critical space solutions. This makes us a unique partner for Space based MIL systems development.

Image Soft Oy

Image Soft delivers advanced underwater surveillance systems designed for coastal area defense, harbor security and key infrastructure protection. We also provide simulators for civilian and military maritime training.

Business, Products and Services

Image Soft's 3rd generation UNWAS system is based on sensitive hydrophones and magnetic sensors capable of detecting the quietest of divers or submarines. With over 30-year experience in the field of subsea surveillance, Image Soft has helped navies around the world to deploy the UNWAS system for long term use as the most cost effective and high performance first detection network. The UNWAS system, along with its training simulator, uses the latest signal processing and software algorithms, with deep learning software assisting the surveillance operator in detecting the earliest signs of approaching threat. The UNWAS system offers a tested and proven solution for persistent 24/7/365 surveillance of the underwater domain.

Inission Lohja Oy

Inission is a profitable total supplier that offers demanding industrial customers in the Nordic region complete electronic and mechanical products of the highest quality. Our services cover the entire product

life cycle, from development and design to industrialization, volume production and aftermarket. By combining this with logistics services and a production based on high flexibility, customer adaptation and short lead times, our offer becomes very competitive.

Business, Products and Services

We at Inission are experts in ruggedized electronics, RF systems and box build. We can offer test facilities for pressure, temperature, and vibration. We offer industrialization towards the earlier-mentioned specialities. We have broad experience with subsea, space and military applications. ISO 9001, 13485 and 14001 certified, ongoing projects towards EN/AS9100 certification.

Intermedius Oy

We have two lamination units in our factory. The creation of functional composites requires knowledge and mastery of the process and a large number of materials.

The secret to successful lamination is close cooperation with the customer. Together we perform tests and development workshops in order to find the optimal solution for each application, whether it be an issue of the ability to withstand washing or residual heat. Moreover, our strengths include an extensive network of suppliers, high-quality materials and a good stock selection.

Adhesive coating: The most commonly used adhesives are powder adhesive, EVA, polyester and polyamide glues. The customer melts the components together by heat bonding.

Business, Products and Services

We have been coating fabrics for decades. Our waterproof, dirt-repellent, durable, and easy-care textile coatings are suitable for home textiles, protective clothing, hygienic products, and institutional textiles.

Feltflex: Is a plastic-coated felt material for the automotive industry, for example. We produce felt fabric from recycled plastic bottles, which we coat with plastic on request. The plastic-coated felt material is suitable for upholstery and soundproofing in the interior of trucks, buses, and other special vehicles, for example.

KNL Networks Oy

KNL is a technology company with beyond line-of-sight communication solutions. Our software defined radios adapt to the needs and requirements of modern military and security operations with fast and reliable

data links in any operating environment. We operate globally in the field of Defence and Security. We are part of the Telenor Group. KNL 's HQ is in Oulu, Finland.

Business, Products and Services

The Cognitive Networked HF (CNHF) is a modern autonomous and automatic HF system. CNHF radios sense their operating environment without the intervention of the user. Radios intelligently detect free spectrums and optimise every parameter – in parallel.

Our products:

- CNHF Manpack - Revolutionary Wideband HF Manpack Radio
- CNHF Vehicular - modular mounting bracket for CNHF Manpack
- CNHF Evolve - makes existing HF, VHF and UHF radios digital and interoperable between each other.

Kova Labs Oy

Autonomy for the real world. We work across software, hardware, and applied research to push autonomy into the environments where current unmanned systems struggle: low altitude, forests, dense urban terrain,

and electromagnetically contested zones. Our focus is reducing operator burden and making unmanned operations operationally relevant at scale, without assuming reliable GNSS, line-of-sight, or constant connectivity.

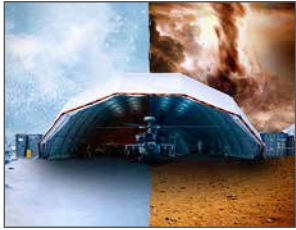

Business, Products and Services

Kilo is an autonomous aerial system designed to be attritable at scale and usable in complex, denied terrain. Kilo runs a fully on-board, vision-based autonomy stack that turns live camera input into real-time spatial understanding for navigation and obstacle avoidance, enabling low-signature operations with intermittent or zero communications.

Leaf Armour Oy

We are a Finnish technology company specializing in protective solutions, developing lightweight and modular protective panels for vehicles, technical equipment, and critical infrastructure. Our core competencies include

advanced composite structures, scalable manufacturing, and high performance in demanding operating environments.

Business, Products and Services

We develop and manufacture lightweight, composite-based ballistic protection panels whose key advantages include low weight, excellent formability, and modularity. The solutions are suitable for complex and three-dimensional shapes, with panels designed to be removable and replaceable throughout their lifecycle. Production is based in Finland, and each panel solution is designed and manufactured according to customer requirements, adapting to complex surface geometries without heavy or permanent structural modifications to the protected platform.

Lentola Logistics Oy

Lentola Logistics Oy was founded in 2017. We design and manufacture electric VTOL aircraft in Finland. We have executed demanding delivery missions, also in the harsh weather conditions of the archipelago.

Business, Products and Services

Lentola's aircraft were originally designed for civilian delivery operations. However, they can be customized for a variety of purposes, which include, among others, 1) border patrol, 2) surveillance & reconnaissance, 3) combat support & logistics and 4) air- / precision strikes. The design is always operation specific, depending on the customer requirements. Our aircraft can be operated in GNSS-denied environments and almost any weather circumstances, unlike most of the other VTOL aircraft in this size and price class. The capability has been tested both in field conditions and in the laboratory. The aircraft size, flight distance and payload capacity can be highly customized. Additional features such as target recognition are added upon request.

Mikro-Pulssi Oy

Mikro-Pulssi is an independent, Finnish company operating in the fire protection industry. We design and manufacture automatic fire alarm and fire extinguishing systems for the military, public and private sectors.

Business, Products and Services

In the past 30 years, Mikro-Pulssi has delivered several hundred automatic fire suppression systems for armoured military vehicles. Our systems have been installed in wheeled vehicles (Patria AMV, XA-203, XA-202, XA-188), tracked vehicles (Leopard 2-based special vehicles, K9 howitzers, M109 howitzers), command and control containers, and mounted on anti-air missile platforms. Our latest product development, ExAct Titan, is an innovative fire suppression system for armoured military vehicles. The system protects the crew and the vehicle against all kinds of fires. Explosive fires and armour penetrations are detected and suppressed in milliseconds, providing excellent protection against modern fire threats such as IEDs.

Modirum Gespi Oy

Modirum | Gespi is a privately owned Finnish defence company with operations in Finland and Brazil, specializing in mission-proven solutions that enhance operational effectiveness and address modern defence

and public safety challenges globally. By integrating AI-driven technologies with traditional warfare methodologies, we provide comprehensive, end-to-end solutions across multiple domains.

Our key expertise are:

- Software Development: AI-powered Command and Control (C2) systems.
- Air Systems: Autonomous unmanned aerial systems like deltawings and switchblades.
- Ammunition: 155mm artillery ammunition, 70mm rockets, MK-8 series bombs, fuzes, and development services.
- Naval Systems: Armoured aluminum boats.
- Communication and power systems: Radio and power systems development and manufacturing.

Through continuous innovation and collaboration, Modirum | Gespi is shaping the future of defence and security operations worldwide.

Morphona Oy Ltd

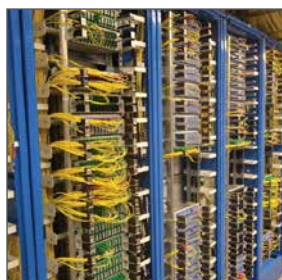

Oy Morphona Ltd. is a privately owned company founded 2014. Company develops innovative products for coatings, additives, and foamed structures based on carbon nanotubes cellulose composite by researchers working in connection with the University of Jyväskylä.

Business, Products and Services

The products are used for radio wave attenuation and protection applications, and they are also suitable for various heating solutions. Products provide electromagnetic shielding and fading properties that are not available on the market. Different materials are suitable as a coating substrate, such as paper, fabric, wood, metal, glass, and various polymers. The products are enabling a unique fading feature, which makes the protected objects invisible to radar and nearfield infrared (NIR) observation. The properties can be adjusted by the properties of the mixture, the quantity and the quality and thickness of the base product.

Napa

Your partner for advanced technological solutions for modern naval challenges

NAPA is a global maritime technology provider innovating at the crossroads of ship design

and operations for over 35 years. We aim to fortify naval fleets with state-of-the-art ship design, stability and damage control solutions based on proven technology tailored to meet modern defense needs.

Business, Products and Services

- NAPA Design: Our advanced 3D modeling, stability analysis, and agile structural design solutions offer flexibility for complex Navy projects, enabling fast, compliant design adjustments.
- NAPA Stability: Manage intact and damage stability in real-time with next-generation technology.
- NAPA Emergency Computer: Gain clarity on ship vulnerability and enhance survivability in critical moments.
- NAPA Logbook: Easy, electronic record-keeping and administration, ideal for lean-manned vessels.

Patria Oyj

Patria is a modern and international defence and technology company with over 100 years of experience. Through our top-notch experts and Protected Mobility, Defence and Weapon Systems and Sustainment Solutions business areas, we ensure reliable operations for our customers and serve as a partner in critical functions on land, sea and air – when if is not an option. Patria's operating countries include Finland, Sweden, Norway, Latvia, Belgium, the Netherlands, Germany, Poland, Slovakia and Japan.

Patria is owned by the State of Finland (50.1%) and Norwegian Kongsberg Defence & Aerospace AS (49.9%). Patria owns 50% of Nammo, and together these three companies form a leading Nordic defence partnership.

Business, Products and Services

PROTECTED MOBILITY

At Patria, we provide superior solutions to enhance operational capabilities in all conditions. Our combat-proven vehicles support superior performance for your mission.

DEFENCE AND WEAPON SYSTEMS

Patria offers a diverse range of defence solutions including the Patria NEMO turreted mortar system, the Patria ARIS and Patria CATCHR tools, and the MUSCL passive radar system for comprehensive strategic and tactical needs, as well as the Patria Drones product family.

SUSTAINMENT SOLUTIONS

At Patria, we optimize and extend fleet availability with our digital solutions, including Patria OPTIME powered by ILIAS, and new advanced capabilities. Our commitment to your fleet on land, in the air and at sea creates ultimate availability for your operability and fleets.

PehuTec Oy

PehuTec Oy is a pioneer in embedded solutions, offering intelligent and secure software solutions for your devices. We have designed top-notch embedded systems for various industries. Our expertise also extends to chipset development, from device-level complexities to system-level excellence.

Business, Products and Services

Our company specializes in designing and implementing customized solutions that meet our clients' needs and help them succeed in a competitive market. We have designed top-notch embedded systems for various industries, including industrial, telecommunications, and health technology. Our expertise also extends to chipset development, from hardware-level complexities to system-level excellence.

Examples of our core competencies include:

- Device-oriented software solutions, such as IoT devices
- Data collection from devices and utilization in cloud services
- AI solutions implemented with edge computing for devices
- Software development for safety-critical devices

Plastex Oy Ab

Oy Plastex Ab is a Finnish, family owned manufacturer with plastics production in Finland. Plastex specializes in blow moulding as its core manufacturing capability, producing durable hollow plastic components for demanding and regulated environments.

Business, Products and Services

The company combines reliable series production, quality control, and secure EU based supply chains, with injection moulding used as a complementary process and selected components sourced from trusted partners. Plastex serves industrial, public sector, and defence related customers and works closely with the Finnish plastics ecosystem, including the Finnish Plastics Industries Federation (FIPIF). Plastex is developing a Nordic defence oriented hydration and water container concept (working title: Plastex Nordic Defence) and is an active partner in EK Resilience Center Finland, supporting security of supply and crisis preparedness.

Polartherm Oy

Polartherm is a trusted supplier of high-performance heating solutions for military and aviation needs. With over 50 years of expertise, we provide reliable, Finnish-

engineered systems to armed forces and aviation operators worldwide.

Business, Products and Services

Our defense portfolio includes 15,000+ heaters delivered to the U.S. Air Force, Canadian Army, Finnish Defence Forces, Republic of Korea Armed Forces, and other military organizations. We supply critical heating solutions for NATO forces and defense units operating in extreme climates. Our field-proven products, such as the HDU-43 ground support heater and Polar BEAR 130K, support aircraft maintenance, field hospitals, and command centers.

Since 1984, we have manufactured aircraft heaters trusted by airlines, military fleets, and ground handling companies across Europe and North America. Built for reliability, ease of use, and efficiency, our solutions ensure seamless operation in demanding environments.

Premetec Production Oy

Premetec is a solid and strong Finnish company specializing in industrial subcontracting and contract manufacturing. We make metal and plastic parts, subassemblies and Toolman proprietary machine tools for customers in the process and manufacturing industry. Quickly, reliably, and productively – even from challenging materials. We also support companies in product design and manufacturing development.

Business, Products and Services

Premetec is a contract manufacturer located in Outokumpu, North Karelia. We manufacture and produce components, assemblies and turnkey deliveries.

Our services include: Machining services, Wire sawing (Electrical Discharge Machining), Surface treatments, Heat treatments, Assembly services, Design services, Composite Molds, Die Casting Molds, Casting Molds, Injection molding, Cutters, and Prototypes.

Applications of our products include: Aircraft, Ammunitions, Mechanical machines and equipment, Mast systems and Tools.

Materials we manufacture from: Aluminum, Composite, Plastics, Steels, Hardenable steels, Stainless steels, Superalloy, and Copper metals.

Railo Technology Oy

Railotech (formerly Aker Arctic) specialises in designing cutting-edge icegoing and icebreaking vessels, leveraging Finnish maritime expertise to meet the rising need for effective, sustainable ice navigation solutions.

These innovations ensure operational safety and efficiency in harsh, icy waters. Central to the company's endeavour is the expertise in ice model testing, a domain where it has been a pioneer for over 50 years.

In ship design for the navy, the company offers vessel hull ice strengthening to all PC classes and vessel winterisation design down to -50°C.

Business, Products and Services

Railotech owns and operates a modern ice model basin where vessel behaviour in ice conditions can be tested. Besides ship design and model testing, the company's products for icegoing vessels include ice-strengthened propellers, shaftline systems and an Ice Load Monitoring System (ILMS).

Saab Finland Oy

Saab has been a trusted partner to Finland for 80 years, investing in local industry, research and innovation. Guided by a holistic understanding of security, we keep people and society safe.

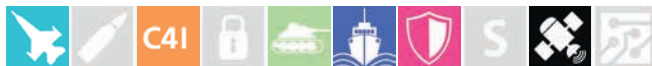

Saab Finland develops and manufactures tactical electronic warfare systems and naval combat management software. Saab has strategic defence technology-related research investments and activities in Finland. Saab Finland also supports Finnish defence and security authorities with a full Saab technology portfolio and ensures the security of supply with local support.

Business, Products and Services

Saab Finland has operations in three main locations:

- Helsinki: Research & Development, Marketing & Sales
- Tampere: Saab Technology Center with microwave, sensor and naval C2 systems product and software development and a serial production facility
- Turku: Combat system to ship integration site including SQ2020 project office.

Salgrom Technologies Oy

For Salgrom, simply extinguishing fires is not enough. Our vision is to put out fires quickly and precisely while minimizing damage, saving both time and money. We offer a smarter way to prevent fire damage and reduce

business disruptions.

As digitalization increases, protecting modern technologies from fire is essential. The growing use of electricity makes it crucial to anticipate and minimize the risk of electrical fires in both private and public sectors.

Modern fire extinguishing systems must be flexible, cost-effective, and adaptable. Salgrom aerosol systems represent a major advancement, comparable to the introduction of sprinkler systems.

Salgrom systems are easy to install, integrate into new constructions, and adapt to various applications. Their efficient design ensures cost-effectiveness and lower lifetime costs compared to traditional systems.

Saloteam Oy

Saloteam Oy manufactures components and offers technical solutions to enhance production efficiency.

Business, Products and Services

CNC machining services

Advanced CNC machining for precision-engineered turned and milled parts, focusing on:

- Parts under 20 kg, with options for larger components
- Various materials, primarily aluminium, plus steel and plastics
- Flexible batch sizes, from prototypes to large orders

Assembly services

Our assembly team complements the CNC machining services by handling subassemblies and complete products.

Production tool design and manufacturing

We design and manufacture tools to improve quality and efficiency in production processes. Our offerings include:

- Assembly Jigs and Tools: Precision and ease of use.
- Automatic and Semi-Automatic Machines: Maximise productivity.
- Peripheral Equipment for Machines: Optimise your machinery's performance.
- Mechanical Solutions for Module and Final Testing: Ensure your products meet the highest standards.

SA-TA-HY Oy / Kimmelux

SA-TA-HY Oy / Kimmelux is a Finnish company specializing in high-security glazing. We provide customized safety glass solutions for ballistic protection, explosions, and forced entry prevention, meeting strict international standards. In addition, we offer a range of architectural glass products for various applications.

We are currently partnering with defence manufacturers to provide glazing solutions for military vehicles and naval applications.

Business, Products and Services

We specialize in tailor-made solutions that meet international security standards for government buildings, banks, security facilities, and industrial applications with products ranging from bullet-resistant glazing and frames to safe rooms, sliding drawers, and safety glasses for machinery.

Currently our top priority in military defense is to provide high-quality glass solutions for mobile applications, including military fighting vehicles, naval crafts, and a wide range of other uses.

Scandinavian Seaplanes Oy Ab & Atol Aviation

Atol Aviation operates in Halli at a former Finnish Air Force base. There, the company has developed the Atol Aurora amphibious aircraft as well as the Atol Protector, a model designed specifically for

governmental and defense use.

Business, Products and Services

Sensofusion, a fast-growing defense technology firm, has acquired Atol Aviation, the largest aircraft manufacturer in Finland. The acquisition integrates aircraft manufacturing expertise and production capacity into Sensofusion, further enhancing the company's ability to conduct air-to-ground sensor reconnaissance. Aerial drone detection covers a significantly wider area than systems operated from the ground. When terrain, forests, and buildings do not obstruct signal paths, a sensor system mounted on an aircraft multiplies the size of the monitored area.

Contact	Mr Anssi Rekula Accountable Manager AtolAviation Vehkaojantie 290 35600 Halli, Finland Tel: +358 40 501 4156 E-mail: anssi@atolaviation.com www.sensofusion.com/aviation/

Sisu Auto Oy Ab

Oy Sisu Auto Ab is specialised in product development and production of trucks and armoured military vehicles, as well as in related life cycle services. The company has provided protection and mobility since 1931.

Business, Products and Services

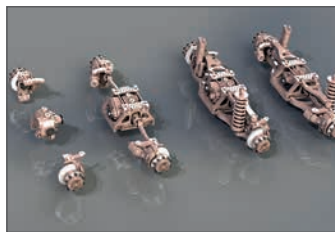

SISU GTP vehicle family consists of various SISU models that share common design principles and components. These shared solutions improve life cycle efficiency, operational readiness, and security of supply. The SISU GTP 4x4 wheeled vehicle has been selected by Finland and Sweden as the platform for their multinational Common Tactical Vehicle (CTV) program.

SISU GTT is a high performance, all terrain tracked vehicle designed for extreme climates and demanding Nordic conditions. Originating from ST Engineering's proven Bronco platform and enhanced with SISU's GTP technologies, it offers exceptional mobility, protection and modularity. This makes it a versatile solution for modern mission requirements.

Systematic Oy Finland

Systematic delivers operationally proven C4I software for commanders at all levels with comprehensive situational awareness and advanced mission management tools.

Business, Products and Services

Our core solutions – SitaWare Headquarters, SitaWare Frontline, and SitaWare Edge – function across all echelons, from the individual dismount through to the Joint level.

Delivering data to all domains, the SitaWare suite is trusted by more than 50 countries globally and has been deployed on missions including combat, peacekeeping, disaster relief, and more.

Systematic's AI-powered decision support tool, SitaWare Insight, empowers users to gain the most of their intelligence cycle, while our in-app digital training platform, SitaWare Aspire, enables easy training.

The SitaWare suite is supported by our dedicated communications backbones, delivering data reliably under all conditions.

T & G Nordic Oy

We design and manufacture electrical cable and harnessing systems for harsh environments based on copper and fiber. We also design and assemble industrial automation cabins and systems. We sell electrical

and optical connectors, electromechanical components, tools, wires, cables, and cable accessories.

Business, Products and Services

At the end of 2017, T&G Sarkkinen Oy and Gett Nordic Oy merged and formed T&G Nordic Oy. Tens of years of experience of both companies are now connected under one common roof.

T&G Nordic Oy offers unique opportunities from design to production, from components to complete systems and from services to training, from deep of the sea to high up the space and all in between. Our customers represent the top of the Finnish technology industries, and we serve them through three strong business units: Defence & Security, Automation, and Components, supported by our professional production team.

In August 2023, the production facility TGN Estonia opened in Rakvere, Estonia.

Toptester Oy

Toptester Oy provides MIL-STD-810 standard environmental and mechanical tests, and we are a privately owned official test house. Our operations are guided by the ISO 9001 certificate, and we are Finas 17025 accredited test house. We also hold Nato AQAP 2110 Quality certificate. We have a 25 years track record from different testing and reliability cases.

Business, Products and Services

We do MIL-testing:

We expose your product, for example, to dust, rain, sand, solar radiation, vibration as well as extreme temperatures and shocks. We also do special MIL-tests like Icing Rain and Blowing Rain.

The military or MIL-STD-810 tests are built to test products designed for use in extreme conditions. The purpose of the test is to determine the environmental impact and the life cycle of the equipment or products. It also tests the performance of materials when exposed to environmental influences during their service life.

Business, Products and Services

We offer CE & FCC certifications, country approvals, EMC, RF Exposure, SAR, Safety, Cyber Security, OTA, antenna pattern, and BF antenna test services, along with tailored test solutions and consulting. Our in-house active and passive antenna measurement systems, based on NF-FF transformation, serve e.g. 5G BF antennas, covering frequencies up to 43 GHz. Using robotic positioning, we measure both passive and active antennas up to 3m in size, providing antenna EIRP up to 43 GHz and 2D/3D antenna patterns up to 53 GHz.

Verona Shelters Finland Oy

We ensure safety. Verona Shelters provides world-class shelter and safety solutions for clients worldwide. We support each project from design and consultation to certified equipment, customization, installation,

commissioning and final documentation. Our shelters and systems protect people and operations from explosions, blast impacts, contamination, EMP effects, earthquakes, tornadoes and biochemical risks. Customer focus, innovation and partnerships guide our daily work.

Business, Products and Services

Verona Shelters Finland supplies shelter products, signs and markings, traffic management products, fire protection products and first aid items. Our strength is a complete, certified shelter solution with dependable service from design to commissioning. We deliver air filtration systems, shelter control systems, blast protective doors, valves and other protective components. Solutions can be tailored to project requirements and tested to meet intl. standards.

Vibrol Oy

Vibrol's Innovations: Leading the Way in Vibration and Shock Isolation.

At Vibrol, we are committed to providing robust solutions for vibration isolation, catering to the increasing demands of the

industry and defense sectors. Our wire rope isolators offer unparalleled performance in challenging environments, effectively reducing high-frequency vibrations and isolating extreme shocks.

Wire Rope Isolator: ROBUST • AFFORDABLE • RELIABLE

- Reduces high-frequency vibrations and isolates extreme shocks
- All-metal structure, operational in three directions, and a wide temperature range
- Suitable for industry and military applications, from heavy machinery to delicate electronics

Business, Products and Services

Shock / vibration isolators; Shock tests; Mass dampers
Dynamic measurements / consulting + troubleshooting

- Strain gauges
- Modal measurements
- Finite element analysis

Volvo Finland Ab

Established in 1928 Volvo Finland Ab is the oldest subsidiary of global Volvo Ab. It supplies transport solutions to its civilian and military customers as well as marine power plants and construction engines for various applications.

Business, Products and Services

Volvo provides its customers with Volvo and Renault Trucks, Volvo Buses and Volvo Penta naval and industrial engines as well as Volvo construction engines and equipment. Volvo also provides the customers with financial leasing and insurance services. Volvo has service network for trucks which covers the whole Finland with 28 regional workshops. Volvo also has well established relations with local companies which are specialized in body buildings and structures on chassis. Volvo has central logistic depot close to Helsinki-Vantaa airport and this guarantees quick deliveries of spare parts to its regional workshops everywhere in Finland. Volvo Penta has service units for marine engines in 46 places of business in Finland. Volvo's core values are quality, safety and environmental care.

VTT Technical Research Centre of Finland Ltd

VTT is one of Europe's leading research and technology organisations, turning global challenges into sustainable, resilient solutions. With over 80 years of science-based excellence, VTT accelerates industrial renewal and

strengthens national and European security and defence through advanced research, innovation, and world-class infrastructure.

Business, Products and Services

VTT provides cutting-edge expertise in resilient connectivity, microelectronics, quantum technologies, cybersecurity, autonomous systems, sensing, space, energy, and nuclear solutions. Defence-related advances include resilient connectivity, AI, quantum algorithms, stealth materials, next-generation sensing technologies, hyperspectral imaging, and digital systems for C2 and autonomous platforms. VTT contributes extensively to European Defence Fund projects, enhancing Europe's defence capabilities through AI-driven, secure, and robust technologies.

XD Solutions Oy

We help defence and technology companies enter, grow and scale in a rapidly changing defence market. Our experienced team and partner network ensure rapid market entry and sustainable growth for

defence technologies.

- Market and customer understanding
- Deep know-how in defence and business development
- Extensive networks and competence pool
- Agile approach plus continuous development and support

Business, Products and Services

Our key services are programme and ecosystem management, technology scouting and validation, and defence business development. We are the coordinating party for the Digital Defence Ecosystem, and we organise large-scale field validation and experimentation events for the Finnish Defence Forces.

Xiphera Ltd

Xiphera is a cybersecurity company specializing in hardware-based cryptographic solutions. We design high-security, high-performance cryptographic IP cores for FPGAs and ASICs, providing

strong protection against both traditional and quantum threats. Our portfolio, including Post-Quantum Cryptography, enables cost-effective, fast development with no hidden CPU or software components, offering secure, optimized solutions for securing critical infrastructure.

Business, Products and Services

Xiphera provides cryptographic cores for hardware implementations

- Post-Quantum Cryptography
- Secure Boot
- Security Protocols
- Hardware Trust Engines
- Symmetric Encryption
- Asymmetric Cryptography
- Random Number Generation
- Hash Functions
- Key Management
